Acacia Triage Platform
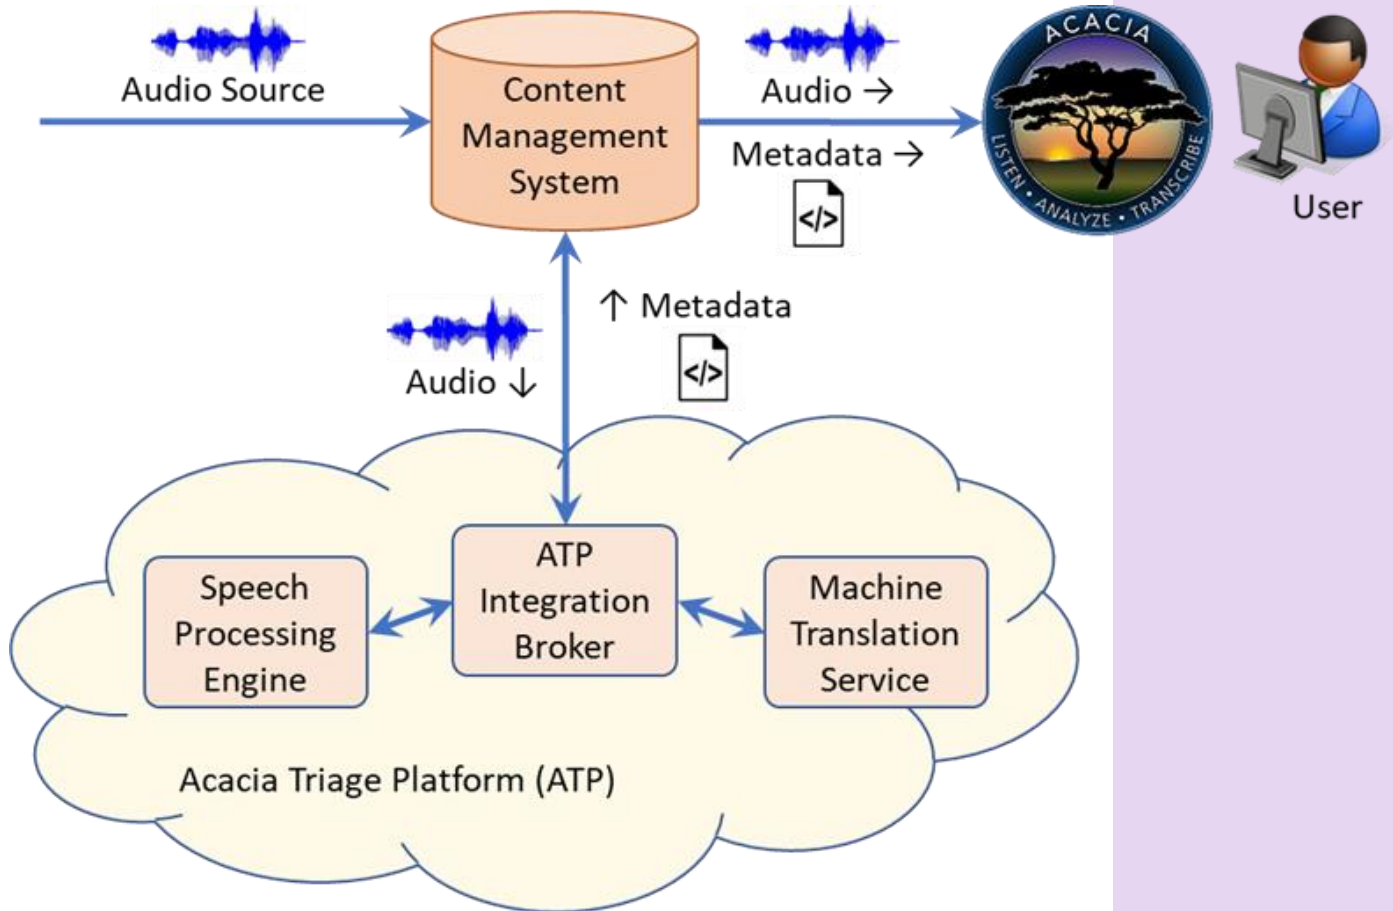

The Acacia Triage Platform (ATP) employs Human Language Technology (HLT) for Audio Triage based on speech content

Key features:

- Automatically detects the languages spoken in the audio
- Transcribes the source languages and translates them into English
- HLT components can be adapted to operational data
- Optimized for far-field audio recording environments
- Distinguish live speech from media speech (e.g., TV, radio, computer)
- HLT metadata complies with a public non-proprietary schema
- Employs best-of-breed HLT from industry, academia, and Government
- Runs on open-source CentOS Linux – standalone or in the Cloud

Scales from laptop to Cloud
